FIG 7

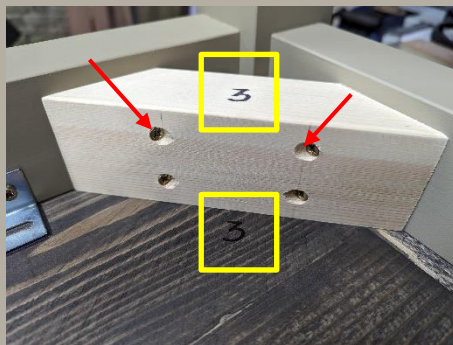

FIG 8

FIG 9

Place the tabletop face down (we recommend placing it on a soft surface to avoid damage)

Stand one of the table leg frames upright with the connectors facing inwards (FIG 1) carefully slide the long table apron on to the leg connector (FIG 2) NB/ It is important that the pre-marked bracket 'A' corresponds with the pre-marked 'A' on the tabletop (FIG 3) DO NOT INSERT ANY SCREWS AT THIS POINT

Using the provided Allen Key and grub screw (FIG 4) locate and tighten into the table connector (FIG 5) fix the next table apron to the same table leg frame then slide the remaining table leg frame on to the open apron ends. Fix as previous, then give each connector a final tighten.

Carefully align the table frame with the pre-marked brackets and tabletop (FIG 3) and fix down using the 30mm screws provided. Ensure that the screws are placed centrally in the elongated hole (FIG 6) as this allows for any movement in the tabletop (timber expands and contracts in its width rather than length) With the frame now fixed down install the corner brace brackets, these are numbered on the bracket and the table (FIG 8) Fix using the provided 70mm screws, the screw head should be flush with the bracket once installed. TIP: Fix the uppermost screws first (FIG 8)

Minimum 2 people: - (FIG 9) Carefully lift and turn over the table...your table is now ready for use, ENJOY!!
